

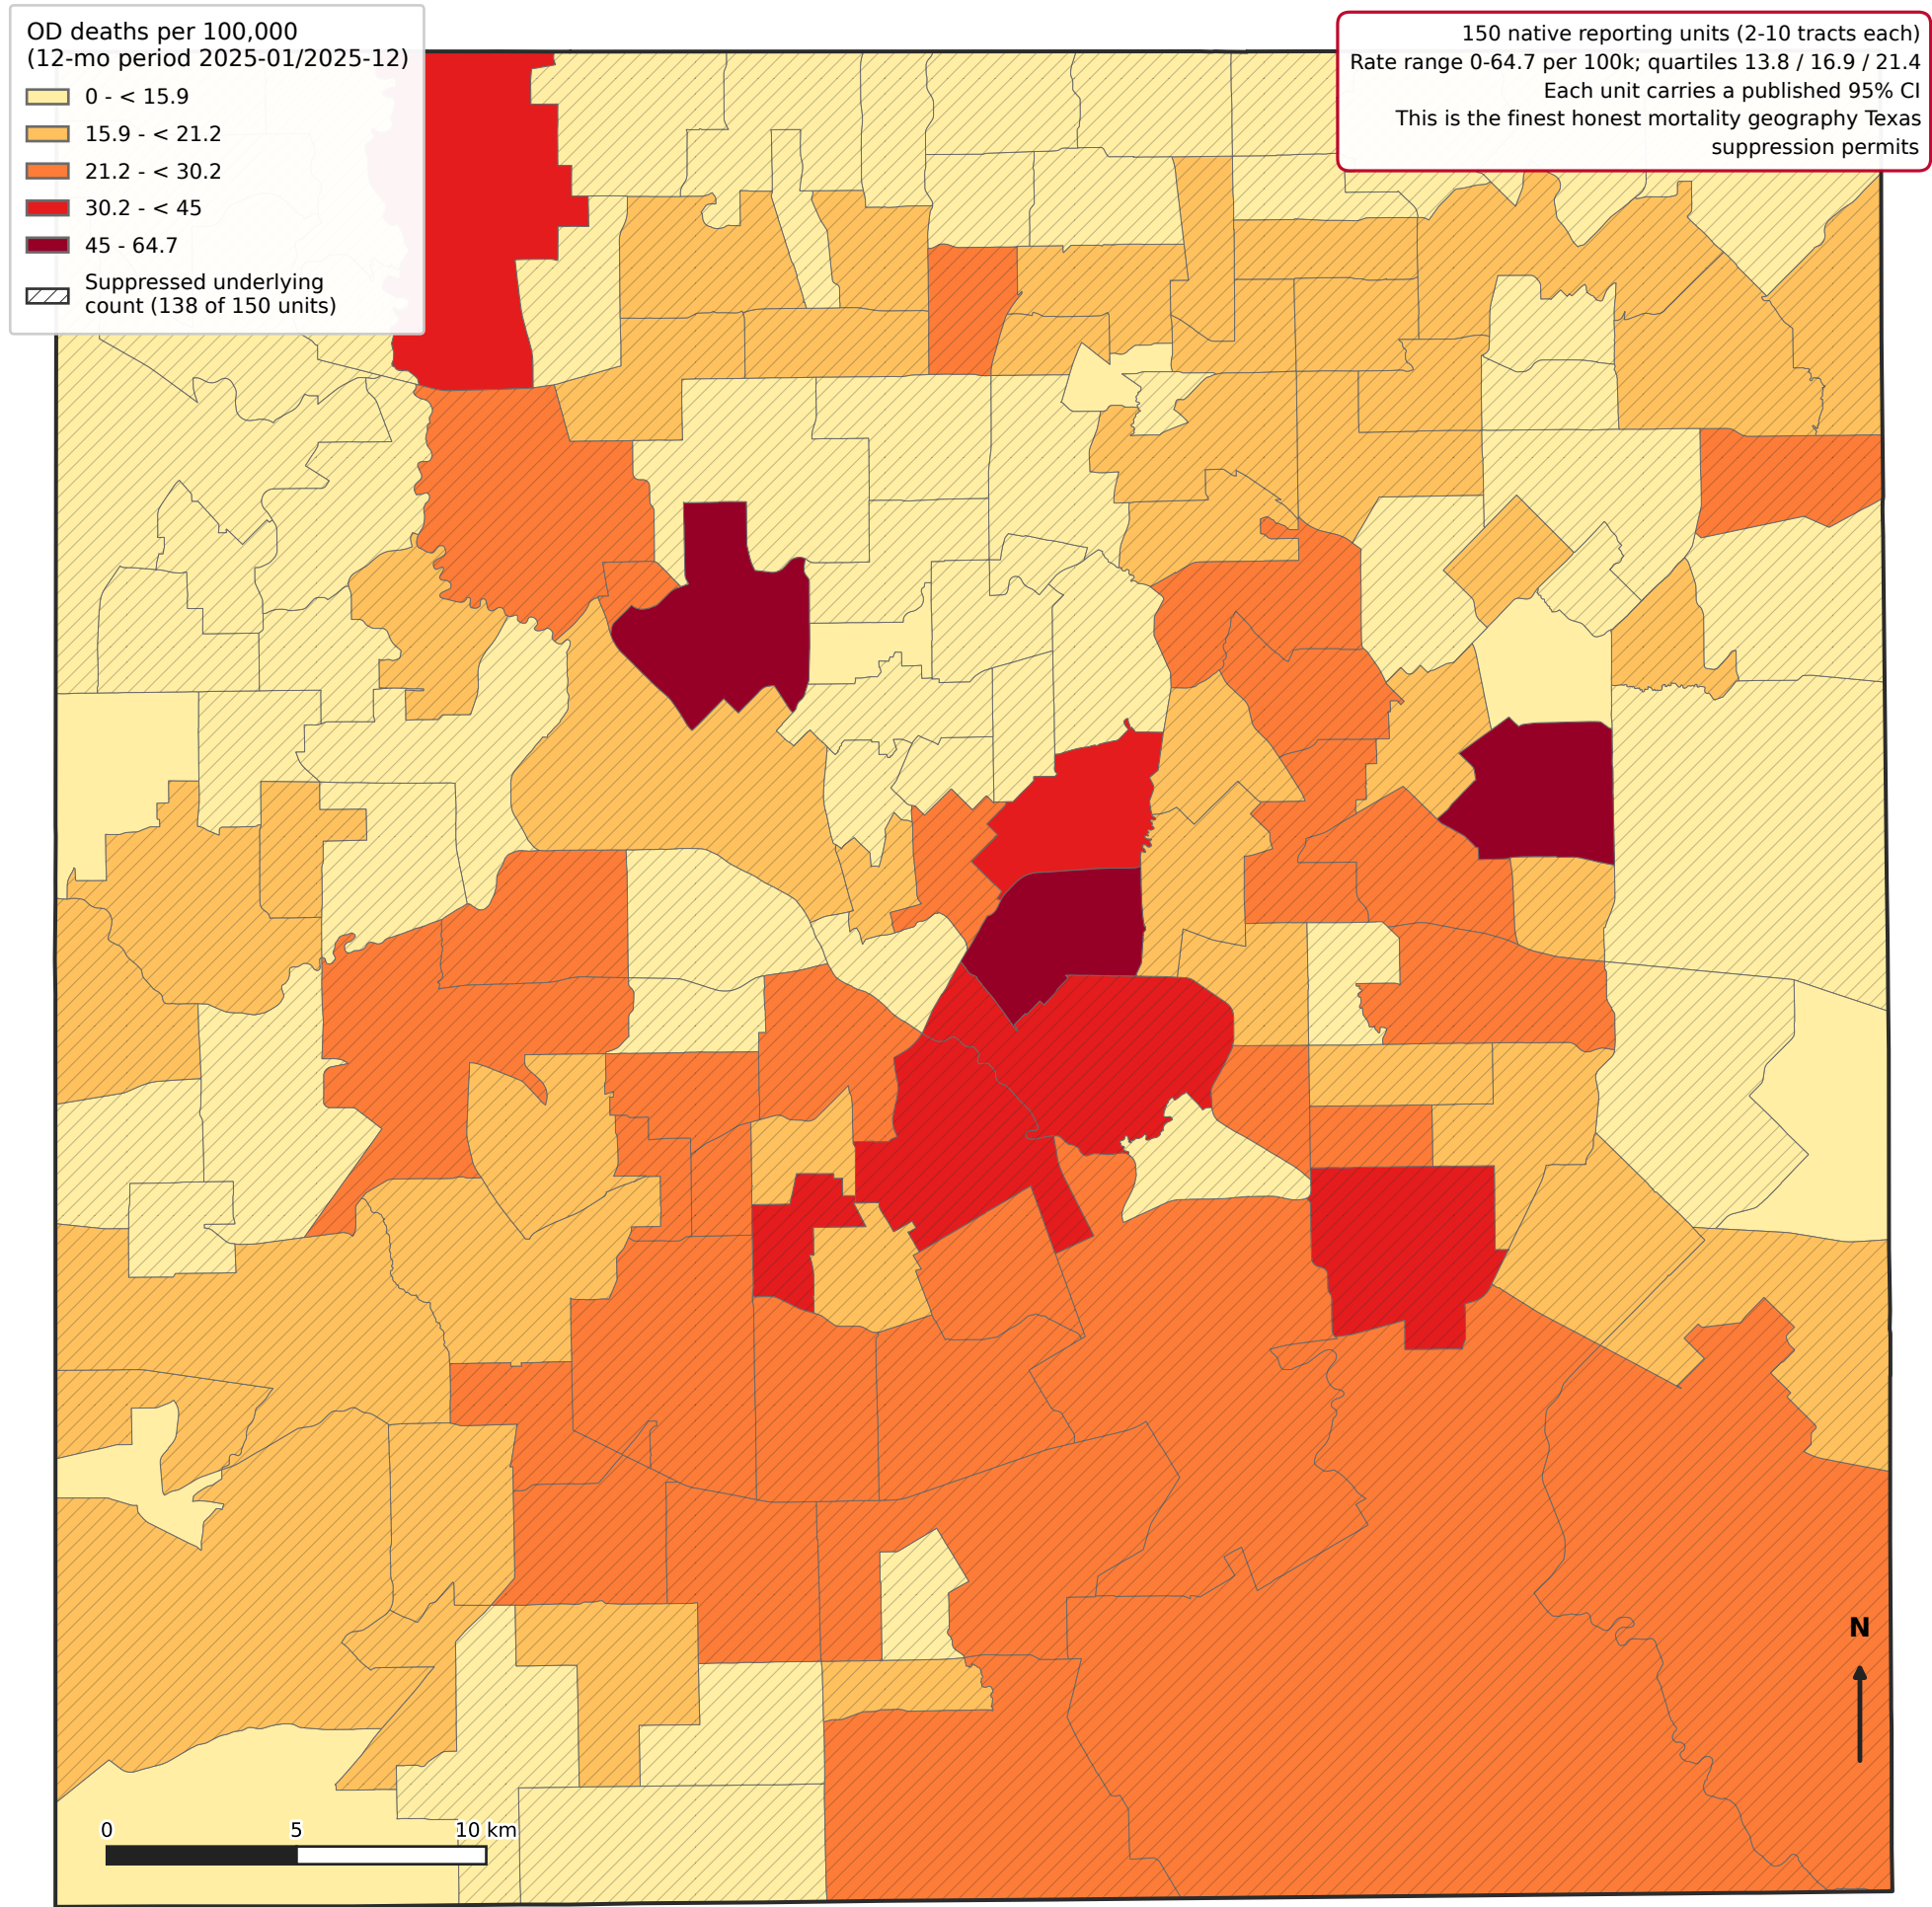

Figure 4. Overdose mortality at CDC native reporting units

Model-based overdose death rate per 100,000 across the 150 CDC aggregation units covering Dallas County (Jenks natural breaks)

Sources: CDC NCHS drug-overdose death rates, model-based (4day-mt2f), 12-month period 2025-01/2025-12, data as of 2026-07-22 | County & tract boundaries: US Census TIGER/Line 2024 | Projection: NAD83 / Texas North Central (EPSG:32138). Texas mortality suppression forces the CDC tract product to publish model-based rates aggregated to native reporting units rather than raw tract counts; 138 of 150 units (92%) have suppressed underlying counts. A 95% confidence interval is published for every unit.
